What is responsive and accessible website design?		
Questions/Cues:		
<ul style="list-style-type: none">What are CSS frameworks?		
Notes		
<ul style="list-style-type: none">CSS frameworks = bring together a set of what can of as CSS components. Bundles of CSS property definitions that can be deployed within designs with a view to simplifying the definition or complexity of CSS needing to be developed for a website project. An example of this can be is a set of sub templates for defining grid layouts and their associated responsive behavior. Other frequently deployed framework based solutions are ready-made button designs, font-family definitions, responsive navigation menus, and predefined image handling bundles.		
Summary		
In this week, we learned about what CSS frameworks are and accessibility.
